QUALITY EXPERIENCE
INNOVATION
SINCE 1975

ARGAL® boasts forty years of activity in the **invention and production of pumps** made of thermoplastic material, **compounds and corrosion-resistant metal alloys**. During the past decade significant efforts were directed to research and development on the entire production and such an effort resulted in pump ranges completely new or renovated both in terms of mechanics and hydraulics systems.

The main mission of **ARGAL®** is continuous and constant technological improvement, along the path of **innovation instead of emulation**, with the aim to offer always the best technical performance and engineering obtaining the leadership in performance while providing appropriate responses to the needs of market dynamics always realizing a “State-of-the-art” quality.

Today the company has a wide range of pumps in various constructions for industrial applications requiring temperatures ranging from -40° C to +130°C, with load capacities up to 1600 m³/h-head over the 100 m. **ARGAL®** also offers the most complete italian range of AODD pumps (from 1/4” to 4”) with metallic or plastic solutions to satisfy the most various market demand.

All is **certified ISO 9001:2000 according to Vision ISO 9001:2000 rule**. We strongly want to offer a wide production program with high quality pumps ranges and really competitive prices.

Why an AODD pump?

Safe

ARGALAIR pump is operated by compressed air and are intrinsically safe.

Able to run dry

Self-priming

The pump design allows high suction lift even at dry-start and with heavier fluids.

Shear Sensitive

The gentle pneumatic movement makes the ARGALAIR an excellent choice for shear sensitive fluids.

Portable and simple installation

ARGALAIR pump can be easily transported to the application site. Simply connect your air supply line and liquid lines and the pump is ready to perform. There is no complex control for installing and operating.

Submersible

If external material are compatible, then the pump can run submerged in the liquid by simply running the exhaust line above the liquid level.

Variable flow rate and discharge pressure

ARGALAIR offers the ability too vary flow and discharge pressure up to 120 psi with a simple adjustment of the air supply.

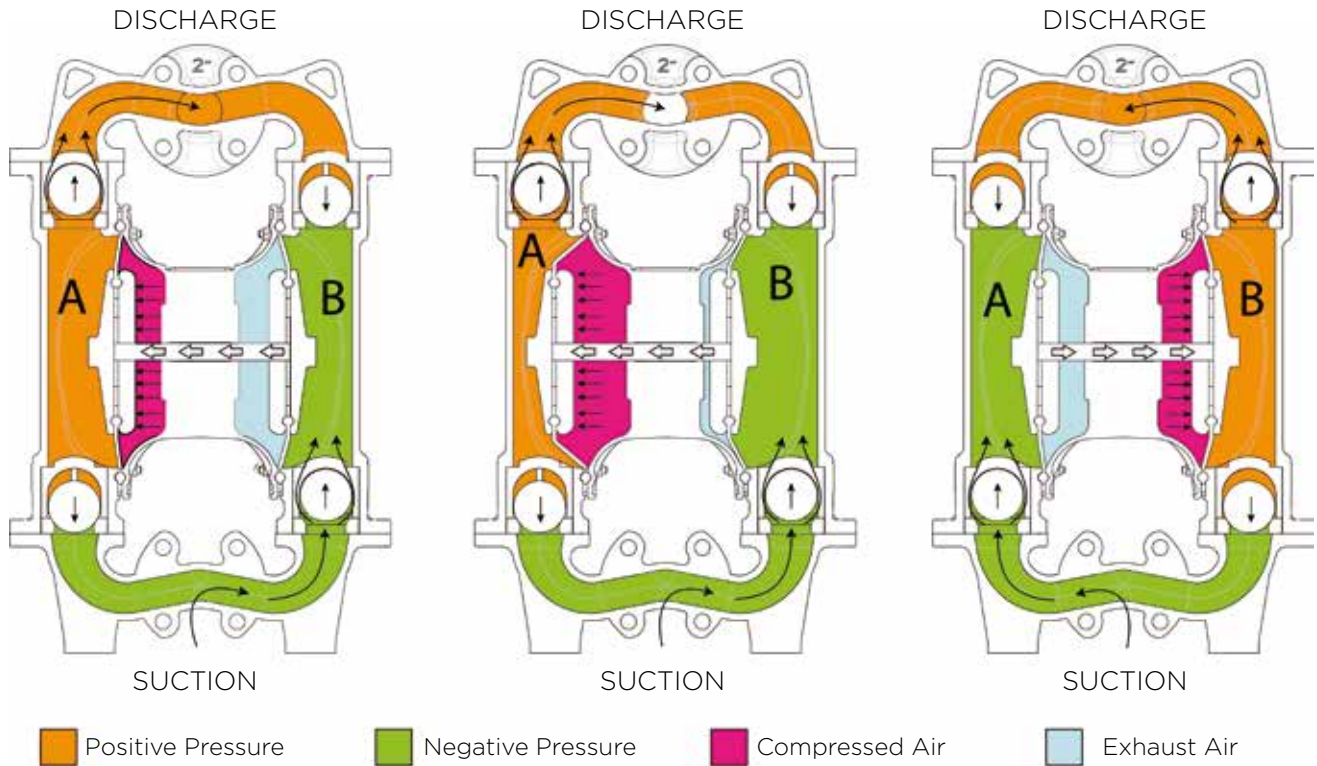

Handles a wide variety of fluids with high solids content

No close fitting or rotating parts so liquids with high solids content can be easily pumped, actually any liquids with max of 90% solids.

Dead-head

Because the discharge pressure can never exceed air inlet pressure, the discharge line can be closed with no damage or wear. The pump will simply slow down and stop.

... operating principles

The pneumatic distribution system sends compressed air behind one of the two diaphragms **(A)**, which pushes the fluid towards the delivery circuit. Simultaneously, the opposite diaphragm **(B)** is in the intake phase as it is dragged by the shaft that connects it to diaphragm **(A)**, under pressure; air presents behind diaphragm **(B)** is discharged into the environment through the flow rate regulator on the pump, while a pressure drop is created in the fluid chamber which 'sucks' the fluid from the suction circuit. When the diaphragm **(A)**, under pressure, reaches the stroke limit, the distributor switches the two inputs to the chamber on the diaphragms air side, putting diaphragm **(B)** under pressure and diaphragm **(A)**, in discharge. When the pump reaches its original starting point, each diaphragm has carried out one air discharge stroke and one fluid delivery stroke. This sequence of movements makes up a complete pumping cycle.

Why choosing an ARGALAIR AODD pump?

... high-quality materials

Our AODD pumps are obtained using **the best thermoplastic polymers of Italy.**

Realised with injected polymers reinforced with composite fiber, AOOD pumps guarantee an optimal mechanical seal as well as a notable corrosive resistance.

Solutions are in fiberglass polypropylene (**PP+G**) and in polyvinylidene fluoride reinforced with carbon fiber (**PVDF+C**) and are also available in ATEX ZONE 1 applications version, for strict and dangerous areas.

The metallic variations can be distinguished for their reliability and low-costs versions in **aluminium and AISI 316** of the ASTRA range.

Whereas the **AISI 316L** and exotic alloys (**bronze, duplex**) versions of the MISTRAL range are focused on robustness and chemical resistance.

... a complete range

A “custom-made production series” cover the entire market requirements but not only: ASTRA and MISTRAL ranges offer various alternatives for the most requested dimensions.

For the compact sizes **from ¼” to ½”**, Argal submits six models corresponding to the different materials.

Four other models are available for the medium sizes until 1”. Two versions are realised for the **1 ½” as well as for the 2”**.

Moreover, we are part of the ring of few world designers to offer large sizes **from 3” to 4”**.

Last but not least, Argal designed and produced a range of economically and energetically advantageous pumps capable of sensible air consumption savings with same dimensions but different performances at an affordable price.

... Our experience into the corrosive and abrasive world

With our forty-year experience in corrosive and abrasive applications, we are specialists in design and problem-solving. Our goal is to offer a wide production program with high-quality and competitive prices solutions.

WETTED PARTS 1	DIAPHRAGM 2	VALVE BALLS 3	VALVE SEAT 4	APPLICATIONS

ASTRA

ASTRA range is ideal for the most **various industrial applications**.

This newest project is made with the very last technologies to guarantee a major reliability of the pump: lifetime and diaphragms are improved, maintenance operations are reduced and it has an enviable quality/price offer.

ASTRA COMPACT range is composed of smaller sizes made for **OEM customers**, guaranteeing the major constructive simplicity and taking up the minimal amount of space.

SPECIAL CONFIGURATIONS

ASTRA DRUM

Perfect for emptying barrels, drums, cans.

MAIN APPLICATIONS

- AUTOMOTIVE INDUSTRY
- CHEMICAL INDUSTRY
- FOOD INDUSTRY
- WASTE DISPOSAL TECHNOLOGY

PUMPS

- ASTRA COMPACT
- ASTRA

ASTRA GEMINI

Delivery and suction manifolds can be doubled in this configuration so that two products can simultaneously be pumped.

MAIN APPLICATIONS

- FLEXOGRAPHIC INDUSTRY
- PAINTING INDUSTRY
- PAPER PROCESSING
- PRINTING INDUSTRY
- WASTE WATER TECHNOLOGY

PUMPS

- ASTRA

ASTRA FREE

The fluid is carried by compressed air while an electric signal controls the speed. In this way, metering, measurement and other applications of the electric command can be majorly accurate. Versions "ASTRA FREE". It can be interconnected with a large range of devices to completely automatise the operation.

MAIN APPLICATIONS

- CHEMICAL INDUSTRY
- FLEXOGRAPHIC INDUSTRY
- PAINTING INDUSTRY
- PRINTING INDUSTRY
- WASTE WATER TECHNOLOGY

to FDA regulation, wet parts of electro polished SUS 316 with surface finish to **125 Ra** (average **2,7 µm**) and PTFE, both certified for food applications.

All **ASTRAFOOD** pumps comply to ATEX, Zona 2, regulation and are adequate to operate in areas with atmosphere potentially explosive and, with the variant of the conductive executions, can operate also in areas classified as ATEX Zone 1.

These pumps are capable to pump fluids with very high viscosity and temperature up to **95°C**.

All other constructive and functional characteristics are equal to those of the ASTRA.

ASTRAFOOD “DFA” serie thanks to their characteristics and design can be applied for the transfer of fluids deployed in industries as food, the cosmetics, pharmaceuticals, or chemical additives, beverages, dairy, biotechnologies, medical appliances, paint and in all those applications were a quick release clamp connection is required or appreciated.

These pumps are usually used to transfer or to remove the products from the mixing contains or storage basins or to pack them in bottles or similar containers.

The air operated double diaphragm pumps **ASTRAFOOD** are constructed with materials compliant

AODD MISTRAL

MISTRAL AODD PUMPS

WITH AISI 316L CENTER BLOCK

Zone 1

MISTRAL range represents the safest and most efficient solution for heavy dangerous and even explosive applications but also for process applications. The entire construction of the body pumps and of the distributor is realised in AISI 316L (low carbon content) making the pumps extremely resistant to corrosion, robust and perfect **for continuous 24/24 operation.**

MAIN

APPLICATIONS

- Off-Shore platforms
- Marine
- Chemical process
- Cleaning/Cement mixer sewage
- Mining

MISTRAL

200 (2") - 300 (3") - 400 (4")

The significant advantages of the distribution system designed for the **MISTRAL**:

- **simple and maintenance free 5-component construction,**
- material of construction resistant to wear and chemicals for long lasting trouble free lifetime,
- affordable cost,
- High-shift speed and high-discharge speed of the exhaust air,
- low consumption as consequence of the fine tuned air quantity supplied to the diaphragms.

“PROGRESS” VALVE

Argal designed a special adaptive air distributor to turn on and off the pump and to fine tune the air flow consumption to the liquid pumped and the required performance with a real reduction of consumption and operational cost.

BR

AODD PUMPS

WITH AISI 316L CENTER BLOCK

AIRSATURN

*"COMPOSITE MATERIALS
PNEUMATIC PUMPS".*

Zone 2

WORLD FIRST

AIRSATURN

300 (3") - 400 (4")

Thanks to the experience of the pneumatic pumps ASTRA from size $\frac{1}{4}$ " to 2" and the know how acquired manufacturing the Fiberglass centrifugal pumps SATURN under his belt, Argal could design and propose first to market these new air pumps made of thermoset resins. The main functional characteristics and peculiarities of the air pumps and its main applications are widespread and generally known.

So far the market lacked a solid and effective proposal for pneumatic pumps of large sizes made of non-metallic materials.

Some competitors offer 3" pumps made of plastic with **the physical-and mechanical limits intrinsic to the nature of the thermoplastic resins** and to overcome these limitations resort to **metal alloys with in turn have limits themselves** (one overall the high cost but even the corrosion-abrasion resistance).

"The composite MADE ARGAL PUMPS, not suffering the limits mentioned above, are proposed as the solution of synthesis and/or alternative".

MAXIMUM CHEMICAL AND MECHANICAL RESISTANCE.

Are obtained deploying composite materials made of vinyl ester resins reinforced with long strand only glass fibres moulded with RTM technique in its factory located in Brescia.

Pumps and parts wet by the liquid pumped in particular have important prerogatives:

- high chemical resistance (the highest among resins, polyester);
- mechanical resistance comparable to some metal alloys;
- dimensional stability, characteristic of the thermosetting resins which during catalysis transform themselves irreversibly becoming insoluble and infusible;
- abrasion resistance and resistance to aging;
- resistance to low and high temperatures (from -35°C to + 115°C);
- lightness typical of composites which, because of differentiated modulus of elasticity for the various parts of the pump and with the minimum thickness of 20 mm exceed the hydrostatic tests from 20 to 50 bar;
- resistance to flame propagation in case of fire.

MATERIALS PROFILE Pump Casings

Pump casings of **AIRSATURN** are of the following types of FRP:

V1G standard vinyl ester resin for **general use**;

V1A mixture of vinyl ester resin for **abrasive liquids**;

V1C mixture of vinyl ester resin for **liquids with chlorine**;

V1F mixture of vinyl ester resin for **liquids with fluorine**.

The significant advantages of the distribution system designed for the **AIRSATURN**:

- **simple and maintenance free 5-component construction,**
- material of construction resistant to wear and chemicals for long lasting trouble free lifetime,
- affordable cost,
- High-shift speed and high-discharge speed of the exhaust air,
- low consumption as consequence of the fine tuned air quantity supplied to the diaphragms.

"PROGRESS" VALVE

Argal designed a special adaptive air distributor to turn on and off the pump and to fine tune the air flow consumption to the liquid pumped and the required performance with a real reduction of consumption and operational cost.

FRP

(PTFE diaphragms)

(NBR, EPDM, SANTOPRENE diaphragms)

The materials used, the switching speed and the distribution spool shift speed all highly **resist to the formation of ice** that detaches itself from the surface to get then ejected from the discharge tube. Possible remaining will never affect the pump operation.

PISTON METERING PUMPS

PNEUMATICALLY OPERATED

AIRPISTON

The AIRPISTON piston pumps family addresses the problems inherent to metering products with high viscosity up to 1,000,000 cPs.

These pumps are **made combining synthetic materials for the body with stainless steel AISI 316** for most of the wet parts.

AIRPISTON range, complies with **the requirement of ATEX** Class 3: Zone 2 (Serie II 3/3GD IIB T 275°F). AIRPISTON pumps are offered in inline or submerged version:

- **In-line pumps**, meant for "pass through" installation with suction pipe and delivery pipe connected to the system.
- **Submerged pumps**, with casing submerged in the liquid and delivery pipe connected to the system.

MAIN

APPLICATIONS

- **Mechanics:** Lubricants and lubro-refrigerants
- **Energy:** Gas odorization
- **Ecology:** Coagulant, flocculent, deodorization
- **Surface Treatment:** Colorant liquids, varnish
- **Cosmetics:** Essences, pastes, lotions, soaps, shampoos
- **Textile:** Basic resins preparation and mix of additive.

PISTON METERING PUMPS

AIRPISTON

Both versions share the pneumatic motor which is the most sophisticated and important part of the device and is responsible for:

- **Actuating the piston to the required stroke length;** adjustable by ergonomic handle command from 0 to 100%
- **controlling the piston speed** movement as well as the frequency drive **from a minimum of 3 pumping per minute to 100 pumping per minute;**
- regulating one of the two lengths without affecting the other (frequency/cycles);
- **accepting external inputs** to execute single stroke metering or **batch dosing;**
- generating outputs to **command external devices** for a total dosing control.

Motor is provided with control connexion.

Addition of add external pneumatic devices (e.s. pilot-operated valve), does not require additional piping.

APL IN-LINE PUMPS - HIGH VISCOSITY

APL pumps operate with viscosity up to **1,000,000 cPs**.

The volume of liquid delivered by each single pump stroke and its **frequency per minute** are controlled.

The pump **generates a signal** at the end of the **metering cycle** as integrated characteristic.

The frequency is controlled by **pneumatically operated unstable oscillator** or external pneumatic or electric devices (**remote control**).

APL

APS SUBMERGED PUMPS - VERY HIGH VISCOSITY

This version is deployed to pump liquids of high-level of viscosity.

The casing is immersed in the fluid to minimise risks of cavitation and consequent erosion and premature wear of parts which is the main cause of failure of pumps to address this service

The neat design of APS pumps simplifies installation for integrates:

- Suction valve integrated within the casing.
- Delivery valve integrated within the pumping piston.
- Sealed pumping piston.
- 2 spheres within its valves.

The motor actuates the piston assy by mean of a metallic stem hosted within the dual purpose metallic (or synthetic) tube.

The liquid pumped by the piston assy pass through the dual purpose pipe and is delivered from its hydraulic connection.

The length of the dual purpose tube can be customised to match as much as possible the required dive depth.

APS

ACL

IN-LINE OR SUBMERGED METERING BASE PUMPS (ABL - ABS - ACL) ARE PERFECT FOR METERING HIGH AND VERY HIGH-LEVEL OF VISCOSITY.

The volume regulator control is integrated while the metering command is provided by an external unit.

The ABL and the ABS are realised in two different typologies: "In-line" (ABL) or "Submerged" (ABS)

ACL- The ACL realised "in-line" are ideal for metering high-viscosity fluids (<3000 cPs). Control devices can be assembled on to the ACL pump on pre set positions thanks to its parallelepiped shape.

Liquid connections can be oriented in many positions.

All the BASE pumps models are in fact metering pumps that can regulate the dosed fluid volume.

Though, they are not equipped with an autonomous control as the metering command is provided by an external unit (on ACL model, a working frequency control can be added for example).

Pumps can be deployed in batteries (of 2 or more units) and can be run simultaneously with single command.

ABS

COMMAND DEVICES

- "Main" APS or APL piston metering pumps
- Frequency generator with pneumatic output
- Transducer with pneumatic output operated by the system cycle (where the pump is installed).

In **CDS system**, pumps have a flow rate equal or inferior to the main pump's one.

CDS

PISTON METERING PUMPS

AIRPISTON

CDS COMBINED METERING SYSTEM

Smartly combines one main metering pump with one minor metering pump to deliver a single modular device to precisely mix two products of different physical characteristics. It is a standard feature of main pump models APL and APS 2.

SPECIFIC APPLICATIONS:

MECHANICS:

Lubro-refrigerants metering

Automatic refill with lubro-refrigerants

ECOLOGY AND ENVIRONMENT:

Dilution and dosage of flocculent liquids, dilution and metering of deodorizers.

Requires the addition of static auto-lube system **SMX** if the products have various viscosity.

SMX STATIC BLENDER

These device is built in 2 lengths and is used for blending two products with different physical characteristics to obtain one homogeneous compound.

The cylindrical construction made with synthetic materials encases the calibrated internal casing of the blending element.

The two outputs are equipped with non return valves.

ACCESSORIES SHARED BY ALL AIRPISTON

AIRPISTON pumps share a list of accessories to match different scenarios and satisfy different requirements:

- External timer (to set time lapse between metering cycles from 0 to many minutes).
- Cycle counter (pre-settable).
- Cycle counter (to actuate dosing batch).
- Solenoid valve (for remote electric command).
- Transducer (to convert the "end of cycle" signal from pneumatic to electric).
- Static blender (to instantly meter and blend meter products).
- Combined metering system kit consisting of: APL pump support, SMX static blender, water main supply adaptor, ABS pumps connexions.

WELL PUMPS

AIRDRAIN

AIRDRAIN series was designed to operate in wells. The main applications are reclaimed areas drainage, ground level control, supernatant and percolate from municipal solid waste collecting areas.

AIRDRAIN is composed of 4 models with different operating system:

- **BSD** BASIC STATIC DRAIN
- **ASD** AUTOMATIC STATIC DRAIN
- **ADD** AUTOMATIC DIAPHRAGM DRAIN
- **ABD** AUTOMATIC BELLOW DRAIN

BSD - BASIC STATIC DRAIN is the most reliable pump of AIRDRAIN series. The pump casing consisting of a hollow vessel is fitted with one intake and one evacuation liquid valve. An airline connects the pump casing with the pneumatic operating control unit located at the top of the well. Once submerged, the pump casing is flooded till filled up through the intake valve because of the liquid's hydrostatic pressure and the air contained inside is displaced through the airline connected to the control unit.

ASD - AUTOMATIC STATIC DRAIN is similar in operating principle to BSD pumps. ADS differ from BSD pumps for a n BSD pumps do not require the external pneumatic operating control unit. The replenishment and the evacuation phases of the BSD pumps are controlled by its internal air compressor control device assisted by a floating probe to detect the liquid level. ADS pumps evacuate exhausted air through a dedicated pipe. ADS pumps do not need the bathymetric probe to monitor the level of the liquid pumped for the function is delivered by the mentioned floating probe. BSD and ASD pump comply with the requirement of ATEX Class 3.

ADD - AUTOMATIC DIAPHRAGM DRAIN These automatic pumps do not require external controls. ADD model delivers the pumping effect by a flexible diaphragm coupled to suction and delivery valves. It can be supplied with liquid level detection to stop once the liquid is missing. The pump does not fail if run dry. This design is advantageous for the pump that can operate properly till the liquid is completely run out even if the pump is not entirely submerged. As an additional bonus, these pumps are extremely short which reduces the risk for the pump to be abandoned inside the well if it deforms.

ABD - AUTOMATIC BELLOW DRAIN is similar to ADD with the difference that the element responsible for delivering the liquid flow is not a flexible diaphragm but a bellow. Thanks to the reduced diameter of the bellow and the diameter of the diaphragm, the ABD pumps are compacter than ADD pumps hence easier to install into minor-size wells.

ADD and ABD pumps are special for they comply with the requirement of ATEX Class 2: zone 1, as such pumps can be safely operated into wells and ideal for extracting percolate from municipal solid waste collecting areas with biogas presence and consequent risk of explosion.

Options for all AIRDRAIN Pumps:

- Installation kit for wells (pressure reducer, suspension cable, air compressed and liquid pipes).
- Lamellar filter on the intake.
- Level control probe for liquid collection tanks, with min. max.
- Only for BSD pumps: level control bathymetric probe
- Only for ADD and ABD pumps: level control device

SELENE (DAMPENER)

The range of SELENE flow pulsation dampeners exploits a new technology which minimises the pulsation typical of the flow delivered by air operated double diaphragm pumps. All volumetric pumps as metering pumps with double diaphragm or plunger piston generate pulsations from their pumping alternative motion and hydraulic shocks potentially capable to damage the complete device.

The pulsation dampeners Selene are mounted on the line where the liquid is delivered and reduce drastically pulsation, liquid hammers and vibration of the pump.

The dampener needs its source of pressurised air supply.

Its use is advised when the hydraulic circuit the pump suffers peaks of pressure, thermal expansions, sudden starts and stops or fast valve shut offs of delivery valves.

PNEUMATIC PULSATION

SELENE dampeners are “active” and do not need tuning or pre loading for they are self adaptive; they can dampen the amplitude of the pulsations up to 90% of their max. amplitude.

Dampeners require a minimal maintenance and are available in the same construction materials of the liquid chambers and diaphragms for thermoplastic pumps and in stainless steel SUS 316 for the metallic versions. For aluminium made pumps the SELENE dampeners are constructed in PPS (Ryton®).

SELENE dampeners are available in ATEX compliant version and are adequate to operate in areas at risk of explosion areas classified as ATEX Zone 1.

PNEUMATIC PULSATION

The major advantages of the Selene dampener are:

- Stabilizing the flow generated by volumetric pumps
- Reducing significantly the vibrations
- Reducing liquid hammers
- Preventing potentially damaging pressure peaks
- Reducing significantly the noise of the system
- Protecting the appliances connected along the same hydraulic line
- Reducing the maintenance cost of the plant
- Increasing global productivity
- Is operating with liquids viscous or laden with solids.

ACCESSORIES

CYCLE-COUNTER

Delivers on/off switch signal at any pumping cycle. This signal can be used as an input for a remote cycle counter device; if coupled to the AODD pump, it may constitute a simple and effective dosing system.

COMPATIBILITY

- ASTRA COMPACT
- ASTRA
- MISTRAL
- AIRPISTON

ANTI VIBRATION MOUNTINGS

Minimise the vibrations transmitted from pump to system.

- 1 Air supply input
- 2 Pump supply output
- 3 Start command
- 4 Stop command
- 5 Pump signal input
- 6 Modality selector Auto/Man.
- 7 Remote start command
- 8 Remote stop command
- 9 Light-activated output
- 10 Preselection impulse counter

STROKE-COUNTER

Counts the number of strokes and is connected to a PCL or a counter to allow several control modes.

TROLLEY

Easy to apply on the installation site.
